Parenting and Child Development in Nontraditional Families - Michael E. Lamb 1998-10-01

The goal of this volume is to discuss--in depth--the ways in which various "deviations" from "traditional" family styles affect childrearing practices and child development. Each of the contributors illustrates the dynamic developmental processes that characterize parenting and child development in contexts that can be deemed "nontraditional" because they do not reflect the demographic characteristics of the traditional families on which social scientists have largely focused. The contributors deal with the dynamics and possible effects of dual-career families, families with unusually involved fathers, families characterized by the occurrence of divorce, single parenthood, remarriage, poverty, adoption, reliance on nonparental childcare, ethnic membership, parents with lesbian or gay sexual orientations, as well as violent and/or neglectful parents. By doing so, the authors provide thoughtful, literate, and up-to-date accounts of a diverse array of "nontraditional" or traditionally understudied family types. All the chapters offer answers to a common question:
How do these patterns of childcare affect children, their experiences, and their developmental processes? The answers to these questions are of practical importance, relevant to a growing proportion of the families and children in the United States, but also have significant implications for the understanding of developmental processes in general. As a result, the book will be of value to basic social scientists, as well as those professionals concerned with guiding and advising clients and public policy.

**Parenting Plans for Families After Divorce** - Joan H. McWilliams 2011 Parenting Plans For Families After Divorce presents a fresh, contemporary and practical guide that shows divorcing parenting how to create a healthy and vibrant Post-Divorce Family. It acknowledges that, while the
parties' original family will take on a different form after the divorce, their original family will still exist and need to be nourished. Parenting Plans For Families After Divorce discards the one-size-fits-all approach to divorce and provides creative processes and solutions that strive to meet the needs of each family member. Using a step-by-step method, the author explains how to write a Parenting Plan in which the parents make the decisions—not the judge. This saves time, money, reduces stress, and creates a healthy and loving environment for the children. Parenting Plans For Families After Divorce describes how to write a Family Mission Statement, make effective parental decisions, create a parenting time schedule (visitation), craft a financial plan, and take the children's ideas into consideration. It contains suggestions for monitoring the children's use of social media, addressing the needs of nontraditional families, adopting child-inclusive provisions, and designing dispute resolution techniques. The Post-Divorce Family Model will change the lives of parents and children. Readers are encouraged to follow Joan McWilliams' Five C's: Commit to your children; Compartmentalize your anger; Communicate with the other parent; Consider the ideas of the children; and Change your approach to conflict. Using a Celtic Tree, a symbol of love, strength, connection, and renewal, Ms. McWilliams delivers a pragmatic and common sense approach for dealing with the variety of financial, emotional and legal issues that families encounter in divorce. Parenting Plans Form Families After Divorce provides a road map for creating a balanced and functional Parenting Plan for the family after divorce.
The Parents' Guide to Psychological First Aid—Annette Marie La Greca 2010-11-01 Presents articles by recognized experts who provide parents with the information needed in order to help children navigate the many trying problems that typically afflict young people.

Men's Changing Roles in the Family—Robert Alan Lewis 1986 A clear examination of timely issues regarding men's changing roles in marriage and the family.

Fathers and Families—Henry B. Biller 1993-01-01 Biller gives compelling evidence that fathers—so relatively under-researched—are very important to sound child development. He focuses on the positive results of active paternal involvement that effect an overall family environment, which is distributively nurturing and satisfying. The presence of a caring father encourages a child's body image, self-esteem, moral standards, and other important qualities. The child-father relationship is demonstrated to impact later life adjustment. Biller establishes, too, that variations in paternal involvement influence not only children but general family well-being including spousal relationships. This is a needed and timely work essential to understanding fathers' roles and potential in family life.

Life-Span Development and Behavior—David L. Featherman 2014-01-14 This volume continues the tradition of the Life-Span Development Series, presenting overviews

of research programs on a variety of developmental topics. Research and theory in life-span development have given increased attention to the issues of constancy and change in human development and to the opportunities for, and constraints on, plasticity in structure and function across life. Acknowledging the need for and existence of interconnection between age and developmental periods, it focuses on conditions for possibly discontinuous development that emerge at later periods. Contributors to this series are sensitive to the restrictive consequences of studying only specific age periods, such as old age, infancy, or adolescence. Each scholar attempts to relate the facts about one age group to similar facts about other age groups, and to move toward the study of transformation of characteristics and processes over the life span.

**Parenting Plan Evaluations**-Kathryn Kuehnle 2012-01-20
When conducting parenting plan evaluations, mental health professionals need to be aware of a myriad of different factors. More so than in any other form of forensic evaluation, they must have an understanding of the most current findings in developmental research, behavioral psychology, attachment theory, and legal issues to substantiate their opinions. With a number of publications on child custody available, there is an essential need for a text focused on translating the research associated with the most important topics within the family court. This book addresses this gap in the literature by presenting an organized and in-depth analysis of the current research and offering specific recommendations for applying these
findings to the evaluation process. Written by experts in the child custody arena, chapters cover issues associated with the most important and complex issues that arise in family court, such as attachment and overnight timesharing with very young children, dynamics between divorced parents and children's potential for resiliency, co-parenting children with chronic medical conditions and developmental disorders, domestic violence during separation and divorce, gay and lesbian co-parents, and relocation, among others. The scientific information provided in these chapters assists forensic mental health professionals to proffer empirically-based opinions, conclusions and recommendations. Parenting Plan Evaluations is a must-read for legal practitioners, family law judges and attorneys, and other professionals seeking to understand more about the science behind child custody evaluations.

**Advances in Clinical Child Psychology**-Benjamin Lahey 2012-12-06 A decade ago, Advances in Clinical Child Psychology was conceived to provide approximately annual updates on the forward edge of research and practice in this rapidly growing field. A look back at the 56 chapters published in previous volumes provides a broad overview of the direction of advancement in clinical child psychology, at least as viewed by one collection of editors, consulting editors, and authors. The trends are clear: There have been decreasing numbers of advances in modes and methods of therapy, an increasing emphasis on the family, a renewed interest in experimental psychopathology (studies of classification, etiology, and prognosis), a growing
rapprochement between biological and psychological perspectives, and continued strong interest in cognition and social relationships. The current volume clearly shows these directions in the growth of the field. One chapter discusses etiology, four are concerned with the psychopathology of specific diagnostic categories, one takes an expanded cognitive approach to social competence, and two look at the family system by examining the effects of male parents and children on other members of the family. A final chapter opens discussion on the important topic of the nature of excellence in the training of clinical child psychologists. It is hoped that this chapter will initiate a national dialogue on this multifaceted and often neglected topic.

**Handbook of Socialization, Second Edition**-Joan E Grusec, PhD 2015-11-25 "Socialization refers to the way in which individuals are assisted in becoming members of one or more social groups, including how the newer members as well as the established ones socialize one another, often in a bi-directional manner, that is, response to socialization impact in both directions. This is the only handbook on socialization that covers the topic from infancy through adulthood. Hot new topics include moral development; the media as a socializing agent; behavior genetics; and, culture. Authors are known in the field"--Résumé de l'éditeur.

**The Scientific Basis of Child Custody Decisions**-Robert M. Galatzer-Levy 2009-03-23 The legal system requires
mental health professionals to provide research summaries to support their evaluations in child custody cases. Contributions from leading developmental researchers, legal professionals, and clinicians describe how scientific evidence is properly used in court. Timely and current, this book helps evaluators access the best information to fulfill their obligations to their clients and the court. The Second Edition adds chapters on family observation, parental alienation, and sexual abuse. Forensic psychologists, family lawyers, and judges will be equipped with the most current information to aid in custody decisions.

**Contemporary Issues in Parenting**-Melissa J. Kane 2005 Contributions including Adam C. Carle, Elena Marta, and Tak Yan Lee discuss such issues as parenting after thirty, the importance of music before birth, and the impact of marital dissolution on mothering and fathering.

**Parenting**-Tom Luster 2006-04-21 Parenting: An Ecological Perspective was originally created in 1993 to answer questions such as: Why do parents differ markedly in the ways in which they care for their children? What factors contribute to individual differences in parenting behavior? The framework used for addressing these questions is the ecological perspective developed by Urie Bronfenbrenner, who recognized that children's development is influenced by the interactions that they have over time with the people, objects, and symbols in their immediate environment. Luster and Okagaki have updated the original text focusing on
parental behavior and also included 6 new chapters covering topics such as: *fathers/gender of parent; *children with special needs; *ethnicity and socioeconomic status; and *parent education. The text summarizes the latest research on factors that influence parenting, with each chapter providing a look at one important influence and the linkages among these various factors. An ecological perspective draws attention to the fact that the lives of parents and children are intertwined, and that understanding factors that influence parents is important for understanding the experiences of children.

**Child Maltreatment**-Dante Cicchetti 1989-06-30 Over forty contributors, including highly regarded researchers in the field, present the most recent findings on the impact of abuse and neglect on cognitive, linguistic, social and emotional development in children.

**What All Children Need**-Linda L. Dunlap 2004 In the second edition of What All Children Need, Linda Dunlap provides important new information and guidance for educators, counselors, clinicians, and others who deal with children's development. Although concepts and ideas from numerous educational and psychological theorists are included, the book's framework is based on the seven levels of Abraham Maslow's "Hierarchy of Needs." Dunlap's intent is to provide concrete and practical examples of ways to nurture developmental needs of children in relation to Maslow's theory. Teachers, child-care providers,
psychologists, counselors, social workers, therapists, and school administrators and staff will find this book of interest.

**Parenting**-Susan Golombok 2014-02-25 Parenting: What Really Counts? examines the scientific evidence on what really matters for children's healthy psychological development. The first section considers whether it is necessary to have two parents, a father present, parents who have a genetic link with their child, or parents who are heterosexual. Section two explores the psychological processes that underlie optimal development for children, particularly the quality of the child's relationship with parents, other family members and the wider social world. Contrary to common assumptions, Susan Golombok concludes that family structure makes little difference to children's day-to-day experiences of life. As well as for students, researchers and teachers, Parenting: What really counts? will be of great interest to parents and those thinking of embarking on a non-traditional route to parenthood. It will also be welcomed by professionals working with families and those involved in the development of family policy.
The Psychology of Grandparenthood - Peter K Smith
2003-09-02 The majority of people will now spend about one-third of their lives as grand-parents, yet developmental psychologists have largely ignored the nature of the grandparental role, and the influence which grandparents can have on grand-children. This book redresses the balance and uses life-span evolutionary and psychodynamic theoretical frameworks to provide a comprehensive analysis of the phenomenon of grandparenthood from cross-cultural perspectives. Much recent work in developmental psychology has disregarded the extended family in favour of the two-generational nuclear family of parents and children. But grandparents do have a significant role in family relationships and children’s development. This volume contains detailed discussion of intergenerational transmission of parenting skills, cooperation and conflict in three-generational families and the ways in which grandparents and grandchildren perceive one another. The importance of considering social and cultural contexts of development applies to grandparents just as much as to other areas of human development. Kinds of family structure, social policies regarding employment, health and housing, attitudes to marriage and even particular historical events all have an impact on the position and role of grandparents and on stereotypes of old age. These factors vary considerably from country to country. Our understanding of grandparenthood can only be enriched by learning about the variety of ways in which it is expressed in difference cultural settings,. Most precious research has been confined to the USA. This book is truly international, containing contributions from Britain, Canada, Finland,
Italy, The Netherlands, Poland, West Germany and the USA. International comparisons enable us to see which elements are essential to grandparenthood and which are culture-dependent. In most Western countries the population is ageing and this sort of study is becoming vitally important. The Psychology of Grandparenthood is required reading for anybody who is professional involved with the elderly and for psychologists interested in development, the life-span and family systems.

The Family Context of Parenting in Children's Adaptation to Elementary School
Philip A. Cowan
2005-05-06 The Family Context of Parenting in Children's Adaptation to Elementary School is a result of a longitudinal prevention study of 100 families begun the year before their first children entered kindergarten. Each family went through an assessment and then a subset was randomly chosen for group intervention. The children in both groups were then studied as they progressed through kindergarten and first grade to assess the quality of their adaptation to the school environment. The text focuses on how parent-child relationships are only one determinant of a child's academic competence, social competence, and behavior. Rather, these relationships must be understood in the context of the role they play within the family as a system. It also addresses the recent challenges to claims about the impact of parents on their children's development. The book sheds additional light on family influences within the larger social environment as a key determinant of the quality of children's adjustment to schooling. It appeals to scientists, professionals, and parents alike.

**Family Mediation**-Howard H. Irving 1995-07-19 As divorce rates rise, family mediation represents an alternative way of making settlements without involving an already overburdened judicial system. This book presents a discussion of the current North American trends in the burgeoning field of family mediation by featuring both a review of the literature and a model for family mediation practice. The practice model presented here, Therapeutic Family Mediation, stresses an ecological perspective, and considers the feminist critique of the mediation process. The authors also address mediation's role in the important issues of joint custody, ethnicity, and child protection. Future directions in family mediation are examined in the final part.

**Fathers and Adolescents**-Shmuel Shulman 2015-12-22
The understanding and study of fathers has traditionally assumed that fathers, compared to mothers, are less involved with their children. Originally published in 1997 Fathers and Adolescents presents a different approach that focuses on the distinctive role of fathers in the lives of their adolescents, especially in their role in adolescents’ attainment of developmental tasks. Drawing on a variety of disciplines, the authors’ examine the relationships of fathers to their adolescents in the context of a changing society. They find that fathers interact in ways that are different from those of mothers, but that are important for both normal and disturbed adolescent development. Psychopathological, aggressive and incestuous behaviour is
considered as well as the role of the father in more ideal circumstances. Drawing on the authors’ wealth of clinical experience, this title will still be an important resource for all professionals working with adolescents, as well as those in research.

**Family-peer Relationships**-Ross D. Parke 1992 This volume provides an up-to-date overview of recent research concerning the links between family and peer systems. Considerable work in the past has focused on family issues or peer relationships, but these systems have typically been considered separately. This volume bridges the gap across these two important socialization contexts and provides insights into the processes that account for the links across the systems -- the ways in which the relationships between these systems shift across development. In addition, the variations in the links between family and peers are illustrated by cross-cultural work, studies of abused children, and research on the impact of maternal depression. In short, the volume provides not only a convenient overview of recent progress but lays out an agenda for future research.

**Divorce and the Next Generation** - Craig Everett

2014-02-04 This informative book clarifies the complex picture of how the experience of divorce in one generation may influence the next generation’s approach to and preparedness for marriage. It identifies research and clinical issues regarding the effects of the parental divorce experience on young adults’ patterns of dating, attachment, and mate selection. Divorce and the Next Generation focuses primarily on young adults and the patterns and attitudes regarding intimacy and attachment that they will carry into their own adult marriages. The book contains research studies which compare differing variables of developmental achievement, personal adjustment, and attitudes of children from divorced and nondivorced families. The implications of these findings for understanding the intergenerational effect from divorce in one generation to marriage in the next are crucial as they guide professionals in their work with young adults and divorcing families in clinical and educational settings. This enlightening volume provides a foundation and a stimulus for more research into these dynamics. Divorce and the Next Generation addresses topics such as: the effects of childhood family structure and perceptions of parental marital happiness on marital and parenting aspirations differences in intimate relationships between college students from divorced and intact families a literature review of short- and long-term effects of parental divorce on *Nontraditional Families Parenting And Child Development*

**Substitute Parents**-Gillian Bentley 2009-09-30 From a comparative perspective, human life histories are unique and raising offspring is unusually costly: humans have relatively short birth intervals compared to other apes, childhood is long, mothers care simultaneously for many dependent children (other apes raise one offspring at a time), infant mortality is high in natural fertility/mortality populations, and human females have a long post-reproductive lifespan. These features conspire to make child raising very burdensome. Mothers frequently defray these costs with paternal help (not usual in other ape species), although this contribution is not always enough. Grandmothers, elder siblings, paid allocarers, or society as a whole, help to defray the costs of childcare, both in our evolutionary past and now. Studying offspring care in a various human societies, and other mammalian species, a wide range of specialists such as anthropologists,
psychologists, animal behaviorists, evolutionary ecologists, economists and sociologists, have contributed to this volume, offering new insights into and a better understanding of one of the key areas of human society.

**Men in Therapy**-Richard L. Meth 1991-10-18 Men have long been considered difficult to engage in psychotherapy, often being described as resistant, unworkable, and unfeeling. The few available books that deal specifically with men's issues tend to lack a central theoretical focus, are highly psychoanalytic in content, or simply do not provide specific guidelines for working with men. This unique and timely volume fills an important gap in the literature by demonstrating why change is often so difficult for them. It provides detailed guidelines for helping men initiate and sustain change in their personal, familial, and professional lives.
